

Fixture comes partially assembled.

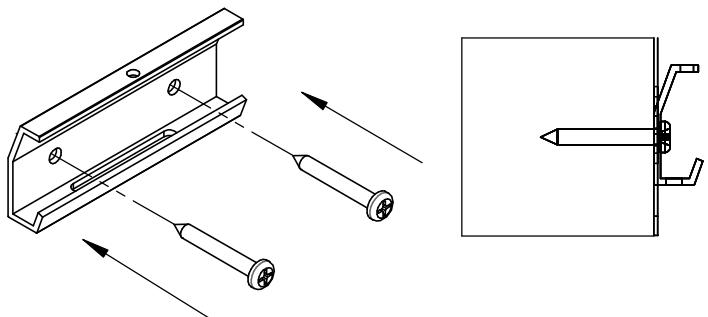

Ensure electrical circuit is disconnected before installation.

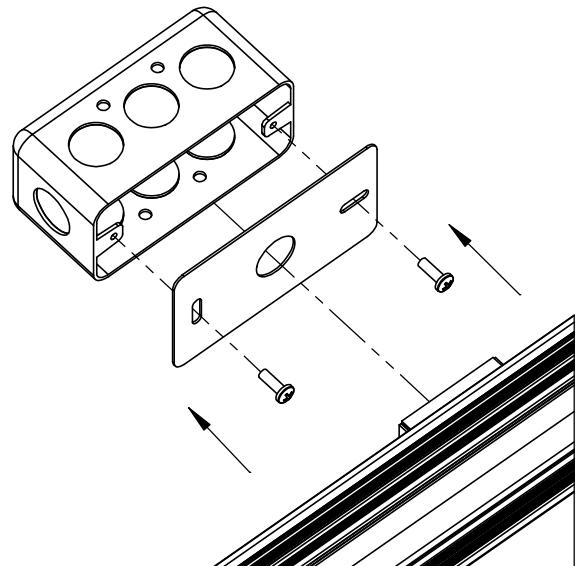

Luminaires must be installed in accordance with national electrical code and local regulation.

Wall Installation

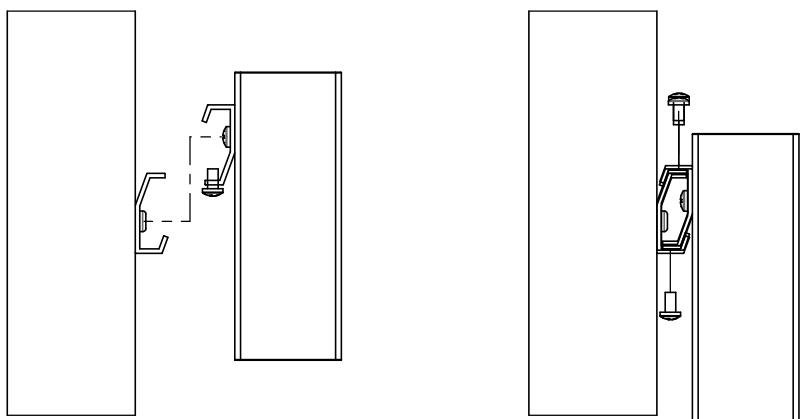

1. Fasten the wall bracket to the wall using appropriate fasteners (not included) in accordance with the structure of the wall.

2. Make appropriate wiring connections between fixture and power box.
3. Mount junction box cover using appropriate fasteners (not included).

4. Install fixture into the wall bracket and secure in position using the provided screws.

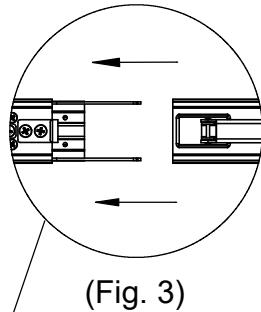

Fixture comes partially assembled.

 Ensure electrical circuit is disconnected before installation.

 Luminaires must be installed in accordance with national electrical code and local regulation.

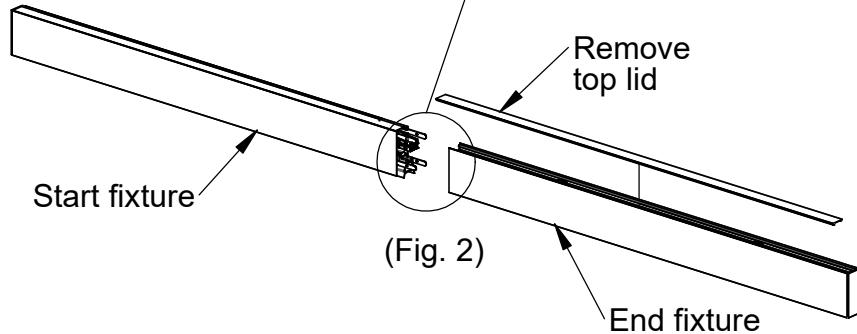

Continuous installation:

10: Begin with the start fixture segment (see Fig. 1).

(Fig. 3)

11: Refer to "Aircraft Cable Suspension" installation instruction sheet and make all appropriate ceiling connections.

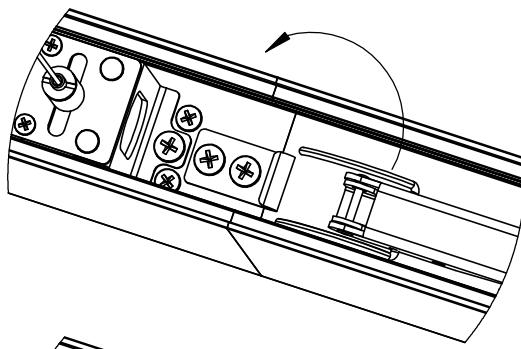

(Fig. 2)

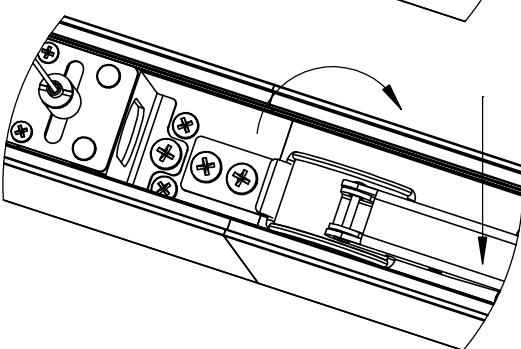

12: Suspend and level the fixture. DO NOT trim excess aircraft cable until the entire fixture installation is complete.

13: Using a flat head screw driver, remove the top lid at the open end of the next fixture segment; either middle or end (see Fig. 2 for the end fixture segment).

14: Suspend the middle / end / fixture segment and connect it to the previous segment by sliding them together (see Fig. 3).

Top view in final position:

(Fig. 4)

15: Open the latch mechanism on the middle / end segments and attach it to the hook on the previous segment. Push down the latch to pull the fixtures together (see Fig. 4).

16: Connect the electrical connectors at junction between sections.

17: Re-install the top lid removed in step 13 (see Fig. 2).

18: Repeat steps 13-17 until entire fixture has been installed.
